EDUCATION

University of Washington — Bothell Bothell, WA

B.S. in Computer Science and Software Engineering | GPA: 3.69 *Aug. 2026*

Dean's List (11 quarters): Autumn '21, Winter '22, Spring '22, Autumn '22, Winter '23, Spring '23, Autumn '23, Winter '25, Spring '25, Autumn '25, Winter '26

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Parallel & Distributed Computing, Database Systems, Secure Systems, Web Programming, Software Engineering, Hardware & Computer Organization

TECHNICAL SKILLS

Languages: Java, Python, C/C++, ARM Assembly, SQL, JavaScript, TypeScript, HTML/CSS, R

Frameworks & Libraries: React, Next.js, Node.js, Express, REST APIs, Socket.io, Vite

Tools & Platforms: Git/GitHub, Linux, MySQL, SQLite, PostgreSQL, Supabase, Google Cloud Platform, AWS, Vercel

Practices: Agile/Scrum, REST API design, database schema design, role-based access control, AI-assisted development & prompt engineering, Anthropic Claude 101 & AI Fluency Framework certified

PROJECTS

UW Howler (Senior Capstone) | howler-teal.vercel.app March 2026 – Aug. 2026

Next.js, React, PostgreSQL, Supabase, Google Cloud Platform, JavaScript

- Built and shipped a full-stack social platform for 30+ UW students, delivering 5 core pages (home feed, profile, search, inbox, landing) and ~10 features end-to-end as sole developer
- Designed and implemented 8+ REST API routes in Next.js covering post creation, user content, search, and real-time messaging, optimizing query performance through normalized PostgreSQL schema design
- Implemented Google Cloud Platform OAuth + Supabase authentication with university-restricted access control, ensuring only verified UW accounts could reach the platform
- Built server-side content moderation pipeline to automatically flag and filter inappropriate posts prior to publication

C Standard Library in ARM Assembly Apr. 2025 – May 2025

C++, ARM Cortex-M, ARM Thumb-2, Memory Management

- Implemented core C standard library memory and string functions from scratch in ARM Thumb-2 assembly for Cortex-M microcontrollers
- Handled system calls, interrupt routines, and memory management without OS abstractions, building strong foundations in low-level systems programming

Movie Rental System Jan. 2025 – Mar. 2025

C++, Object-Oriented Programming, Custom Data Structures

- Designed an OOP-based rental store simulation with custom hash table structures for O(1) average-case lookups and borrow/return logic with state validation

EXPERIENCE

Freelance Technical Consultant — AI-Assisted Website QA June 2025 – Dec. 2025

Swift Cleaning — Seattle, WA

- Owned end-to-end delivery of a client's production website: gathered requirements, identified and resolved 5 bugs across frontend and backend code via iterative AI prompt engineering, and shipped to production
- Translated non-technical client feedback into precise technical specifications, improving AI-generated code quality across multiple revision cycles
